SUMMARY

QA Automation Engineer with 2 years of experience designing robust hybrid frameworks (POM + Data-Driven) for web and API testing. Highly proficient in modern automation using TypeScript Playwright, Java Selenium, and Rest Assured. Strong focus on test optimization, CI/CD integration, and delivering scalable automation solutions.

PROFESSIONAL EXPERIENCE

Associate Software Engineer (Test Automation)

2024 – Present | Noida

Test Yantra

- Designed and developed a hybrid Selenium WebDriver automation framework (POM + Data-Driven) using Java and TestNG, improving reusability and maintenance by 40%.
- Created and executed 150+ UI automation test cases across multiple browsers (Chrome, Firefox, Edge) ensuring robust cross-browser compatibility.
- Integrated the framework with Jenkins and Maven for CI/CD, reducing deployment failures by 30% and enabling seamless automated test execution.
- Collaborated closely with developers, product managers, and QA peers to identify high-impact defects early in the release cycle, enhancing overall product quality.
- Applied Agile methodologies — contributed to sprint planning, daily stand-ups, and retrospective discussions for efficient team delivery.
- Worked on REST Assured-based API automation to validate backend services, improving end-to-end test coverage and regression reliability.

PROJECTS

CRM Automation Testing

(Selenium WebDriver, Java, TestNG, Maven, GitHub, Jenkins, Extent Reports)

- Automated key CRM functionalities using Selenium and TestNG with POM structure.
- Conducted manual and automated testing across browsers and versions.
- Integrated automation with Jenkins; used JavaScriptExecutor and dynamic waits for synchronization.
- Contributed to 50–60% manual effort reduction and improved defect detection rate.

E-commerce End-to-End Automation Framework

(TypeScript, Playwright, Custom POM, GitHub Actions, Allure Reports)

- Architected and developed a robust Hybrid Automation Framework from scratch using Playwright and TypeScript for an E-commerce platform (Swag Labs).
- Designed a scalable, function-based Page Object Model (POM) with custom Action, Locator, and Assert utilities to maximize code reusability and maintainability.
- Automated 20+ real-time End-to-End (E2E) test cases covering critical business modules including Authentication, Dynamic Sorting, Cart validations, and Checkout journey.
- Integrated Allure Reports for advanced graphical test execution reporting and configured GitHub Actions (CI/CD) pipelines for automated cross-browser testing on the cloud.

API Automation Testing (REST Assured Framework)

(REST Assured, Java, TestNG, Maven, Jenkins, Postman)

- Designed and implemented a REST Assured-based API automation framework integrated with TestNG and Maven.
- Automated critical API test scenarios covering GET, POST, PUT, and DELETE methods for end-to-end validation.
- Implemented JSON schema validation and dynamic parameterization to ensure robustness and data accuracy.
- Integrated the framework into Jenkins CI/CD pipeline for scheduled regression runs, reducing manual API testing effort by 70%.
- Enhanced overall test coverage and improved early defect detection in backend services by 35%.

EDUCATION

Gujarat University

Bachelor's of Computer Application

2020 – 2023 | Ahmedabad, Gujarat

Gyanmanjari Vidyapith

11th - 12th Science

2017 – 2019 | Bhavnagar, Gujarat

TECHNICAL SKILLS

Automation Tools

Selenium WebDriver, Playwright, REST Assured, Postman, TestNG, Cucumber

Programming knowledge

Core Java, TypeScript, JavaScript

CI/CD & DevOps

Jenkins (pipelines), Maven, GitHub Actions

Version control

Git/GitHub

Reporting Tools

Extent Reports

INTERESTS

Technical Exploration

Building automation scripts for personal projects, experimenting with CI-CD tools.

Fitness & Discipline

Marathon training, yoga – emphasizes focus and resilience for high-pressure testing environments.

Collaborative Problem-Solving

Team sports (cricket), open-source contributions

Continuous Learning

Attending QA webinars,

Following ThoughtWorks Tech Radar for automation trends.
